

## NPM Class Library

### 1. Introduction

This document describes about what is class library, the way of understanding, the management method and so on. Especially, this document aims for many engineers to create better NPM class library.

NPM class library is divided into several groups due to its huge volume. This group is called GENRE. Genre is not only the independent island from the classification viewpoints, but also a set of the independent islands and trees.

In this document, genres and a basic structure of class library are explained. Then main class classifications and configurations are also explained. In the class classifications, abstract classes that cannot create instances but unify the nature of the lower classes might be created. This abstract classes are described with (ABS) class\_name.
